EDUCATION

University of California, Berkeley – College of Engineering

May 2027

B.S. Mechanical Engineering, Minor in Data Science

GPA: 3.68/4.0

- **Relevant Coursework:** Statics, Dynamics and Mechanics, Heat Transfer, Product Design, Thermodynamics, Fluid Mechanics, Dynamic Systems and Feedback, Engineering Behavior of Materials, Mechatronics Design, Electronics of IoT, Statistics and Data Science for Engineers, Experimentation and Measurements, Principles & Techniques of Data Science
- **Engineering Skills:** 3D Printing / Laser Cutting / Soldering / Engineering Drawing / CNC / Tooling Design / GD&T / FEA / DFM / DFA (Design for Manufacturing & Assembly) / Lathe / Waterjet / Technical Documentation / Lean Six Sigma
- **Technical Skills:** SolidWorks / MATLAB / Python / SQL / AutoCAD / CATIA / Excel / DAX / ANSYS / Smartsheet

WORK EXPERIENCE

Niagara Bottling – Product Engineer Intern

June 2026 - September 2026

- Performed a **comprehensive market study** of 0.5L bottled water products by evaluating **key performance metrics**, including top load strength and empty bottle weight, benchmarking competitor packaging against Niagara Bottling products.
- Developed an **AI agent** to boost the Product Engineering team's productivity; the agent automated tasks such as scope change forms, master data table sorting, and validation, reducing task time from **4 hours to 30 minutes (8x efficiency gain)**.
- Collaborated with Product Engineering and cross-functional teams to gain exposure to **product lifecycle management**, supporting project execution, **tracking product development** activities, and contributing to data-driven recommendations.

Abbott – Manufacturing Engineer Intern

January 2026 - June 2026

- Developed **Power BI** dashboards and a **Power Apps**-based **inventory management system**, increasing warehouse visibility, tracking accuracy, and data-driven decision-making using queries developed through **TOAD Data Point/Oracle**.
- Supported Alinity-I production and assembly operations by **diagnosing manufacturing issues**, assisting technicians with instrument builds, **validating corrective actions**, and improving production efficiency through **rapid issue resolution**.
- Conducted **root cause investigations** for supplier quality, component, and manufacturing issues; collaborated with Quality, Operations, Engineering, and Supply Chain teams to implement **data-driven corrective actions** and **prevent recurrence**.

LensAI – Product Design Engineer Intern

September 2025 - November 2025

- Designed **smart glasses** frame and internal housings to integrate **PCB**, battery, **ESP**, **camera**, and bone-conduction speaker.
- Engineered enclosures and **internal routing** channels to support **clean wiring** and **vibration isolation** within the frame.
- Collaborated with electrical teams to align **mechanical constraints** with user comfort and real-world **testing feedback**.

ENGINEERING PROJECTS

Automated Snack Dispenser – Project Lead | Embedded Systems, IoT, Python

April 2025 - May 2025

- Designed and developed an IoT-enabled snack dispenser, integrating **embedded systems** for precise automated control.
- Engineered a user-friendly dispensing mechanism using **2 sensors and 2 actuators**, optimizing functionality and reliability, the design featured a wide range of motion, allowing a wide variety of snacks to be dispensed and **accurate serving** portions.
- Programmed an **ESP32** microcontroller using **Python**, enabling reliable wireless communication for automated dispensing.

iPhone LiDAR Mount - Project Lead | Autodesk, Milling, Waterjet, 3D Printing

February 2025 - April 2025

- Developed and designed an innovative **phone mount** that utilizes **LiDAR** in newer phones to measure organic objects.
- Utilized fabrication machines such as **CNC**, **waterjets**, and **3D printers** to assemble the base, arm, and mount to bearing.
- Fabricated a robust attachment to a **80mm bearing**, a 3D-printed iPhone stand, and a counterweight for smooth revolutions.

Arcade Machine - Mechanical Lead | SolidWorks, Embedded Systems

October 2024 - November 2024

- Designed and developed a comprehensive **gantry system** concept for the game, involving **5 belts** and **4 rails** for motion.
- Leveraged **3D-printing** and **laser-cutting** skills to create **precise specifications**, ensuring the project's successful execution.
- Programmed and calibrated **5 servo motors** to control belt movement, optimized voltage adjustment with external batteries.

ABOUT ME

- **Awards:** President's List (2022) / Dean's List (2023) / Phi Theta Kappa Honors Society / UC Berkeley Transfer Scholarship
- **Extracurriculars:** PTK Honors Society / Theta Tau Professional Engineering Fraternity / Core Consulting Group (CCG)
- **Interests:** Vlogging / Basketball / Gym / Food / 3D Printing / Legos / Cooking / Poker / Marathon / Consumer Technology
